Insertion Flow Meter Series 454FTB

The Kurz454FTB single-point insertion flow meter for industrial gas flow measurement includes the qualities and features found in all Kurz constant temperature thermal flow meters that make them outperform all other currently available thermal massflow meters, including:

- The highest repeatability, accuracy, and reliability available
- The fastest response to temperature and velocity changes in the industry
- Constant temperature thermal technology
- Interchangeable sensor and electronics (single circuit board) — no matched sets
- Continuous self-monitoring electronics that verify the integrity of sensorwiring and measurements
- Sensor does not overheat at zero flow using a unique constant temperature control method and power limiting design
- Zero velocity as a valid data point
- Insensitive to left or right horizontal installations
- Completely field configurable using the local user interface or via a computer connection
- Supports HART, Profibus DP, and Modbus communication protocols
- User-programmable correction factors to compensate for velocity profiles
- User-defined binary gas compositions or up to five multiple gas calibrations
- Velocity-temperature mapping for wide ranging velocity and temperature
- Sensor Blockage Correction Factor (SBCF)
- Flexibility with transmitter-attached or transmitter-separate designs
- Patented digital sensor control circuit (US 7,418,878)

KurzInstruments is dedicated to manufacturing and marketing the best thermal mass flow meters available and to support our customers in their efforts to improve their businesses.

Applications

Primary, secondary, tertiary & overfire air
Stack & flue gas
Flare gas
Boilers & recovery boilers
Industrial and process gases
Compressed air
Coal pulverizer air
Cement plants
Aeration air and treated biogas
EPA & AMS emissions monitoring

SPECIFICATIONS

- Velocity range**
0 to 70,000SFPM (325 NMPS)
- Flow accuracy**(SCFM at laboratory conditions)
 $\pm(1\% \text{ of reading} + 20\text{SFPM})$
- 0.25% reading repeatability**
- Velocity time constant**
1 second for velocity changes at 6,000SFPM (constant temperature)
- Process temperature time constant**
8 seconds for temperature changes at 6,000SFPM (constant velocity)
- Temperatureaccuracy**
 $\pm(0.5\% \text{ of reading} + 1^\circ\text{C})$ for velocities above 100SFPM
- Electronics operating temperature**
Integral display
 -13°F to 149°F (-25°C to 65°C)
Remote aluminum enclosure
 -40°F to 149°F (-40°C to 65°C)
Remote polycarbonate enclosure
 -13°F to 122°F (-25°C to 50°C)

PROCESS CONDITIONS

- Process pressure rating**
Up to 300PSIG (20 BARg)
- Process temperature rating**
 -40°F to 500°F (-40°C to 260°C) HT or
 -40°F to 932°F (-40°C to 500°C) HHT

APPROVALS

- EPA mandatory GHG certification**
40 CFR 98.34(c)(1)
- Alarm output conformity**
NAMUR NE43
- European Union CE compliance**
EMC, LVD, PED, ROHS, and WEEE
- Canadian Registration**
CRN
- CSA, ATEX & IECEx approvals for Nonincendive, Flameproof, and Explosion-proof**
EN IEC 60079-0, EN IEC 60079-1
EN IEC 60079-15, CSA Class I, Div. 1 and 2

TRANSMITTER FEATURES

- Aluminum (Type 4, IP66) dual chamber polyester powder-coated enclosure**
- Adjustable display/keypad orientation**
- Optically-isolated loop powered 4–20mA output ($\pm 48\text{VDC}$ isolation)**
12-bit resolution and accuracy
Maximum loop resistance is 300Ω at 18 VDC,
 550Ω at 24 VDC, 1400Ω at 36 VDC
- Input power**
AC (85–264V 50/60 Hz, 24 watts max.) or DC (24 V $\pm 10\%$), 1 A max.
- Integral or remote user interface**
- Easy-to-use interface**
Backlit display / keypad
2-lines of 16-characters each
- User-configurable flow display (scrolling or static)**
- User-configurable English or metric units for mass flow rate, mass velocity, and process temperature**
oC, oF, KGH, KGM, NCMH, NLPM, NMPS, PPD, PPH, PPM, SCFH, SCFM, SCMH, SFPM, SLPM, SMPS
- Velocity-dependent correction factors for flow rate**
- Two optically isolated solid-state relays / alarms**
Configurable as alarm outputs, pulsed totalizer output, or air purge cleaning
- Built-in zero-mid-spandrift check**
- Built-in flow totalizers and elapsed time**
- User-configurable digital filtering from 0 to 600 seconds**
- Configuration/data access**
USB or RS-485 Modbus (ASCII or RTU)
- Meter memory**
200 recent events, top 20 min/max, and 56 hours (10 second samples of trends)
- 3-year warranty**

SUPPORT & ELEMENT COMPONENTS

- Sensor material**
C-276alloy all-welded sensor construction (standard)
- Sensor support**
316L stainless steel (standard)
C-276alloy (optional)
PTFE coated (optional)
- Sensor support diameter**
 $1/2", 3/4", \text{ and } 1"$
(12.7 mm, 19.05 mm, and 25.4 mm)
- Sensor support length**
6" to 60" (152 mm to 1524 mm)
- 3-year warranty**

OPTIONS

- Enclosures**
Aluminum or polycarbonate (remote only)
- Multiple gas calibrations with up to five curves loaded in memory**
- User-defined binary gas compositions**
- Communication protocols**
HART (v7 FSK) and PROFIBUS DP
- One 4–20mA non-isolated analog input**
- Digital input dedicated to purge and zero-mid-spandrift check**
- Pulsed output as a remote flow totalizer**
- Flow valve PID controller and configurable control application**
Permits controlling set point velocity or flow rate through available control valve, damper, or 4–20mA interface
- Hardware accessories**
Available hardware includes flanges, ball valves, restraints, retractors, cable glands, conduit seals, cable, compression fittings, packing glands, and branch fittings

PROCESS TEMPERATURE & COMPENSATION

Temperature influences the physical properties of gases, so temperature compensation is required for a thermal sensor to accurately measure gas flow rates.

- **Standard Temperature Compensation (STC)** is used for process temperatures from 0°C to 125°C or from 0°C to 260°C over a moderate velocity range.
- **Velocity Temperature Mapping (VTM)** is used when the process temperature and gas velocity vary widely. Multiple velocity calibrations are stored in the meter. VTM compensation is based on air; specific gas correlations are required to ensure accuracy at high temperatures.

SPECIALTY GAS VELOCITY CALIBRATION

There are two types of gas calibration:

- **Laboratory gas calibrations** are performed with gases of high purity and are NIST traceable. Values above the calibrating facility limit are correlated up to the specified range. Customers must specify the calibration process pressure.
- **Correlation gas calibrations** are based on experimental data correlated to an Air calibration at ambient pressure and temperature. The flow element is calibrated in Air, and then an additional calibration data sheet is generated using the correlation factors. All correlation calibrations include velocity-temperature mapping.

Add $\pm 5\%$ of reading to the accuracy specification when using a correlation calibration.

For Oxygen gas, the customer is responsible for ensuring the mass flow sensor is clean of hydrocarbons and safe for Oxygen use.

ANALOG & DIGITAL INPUTS

All options include USB interface with ASCII text and Modbus protocol through RS-485.

The 4–20mA Analog outputs (AO) are used for flow rate and/or temperature, or one AO for PID flow control. All AO are NAMUR NE-43 compliant.

Relay digital outputs (DO) can be alarms, EPA zero-mid-spandriftis active, or pulsed totalizer function. PID uses one 4–20mA output for the flow controller. The EPA zero-mid-spandriftcheck requires a contact closure to start the drift check. All 4–20mA outputs are used during the Drift Check Calibration process.

EPA zero-mid-spandriftcheck can be initiated using digital inputs (DI), elapsed runtime automatic drift check, Modbus, or HART.

The 4–20mA Analog input (AI) supports feedback to the device.

AIR PURGE SENSOR CLEANING SYSTEM

The primary application for the Model 454PFTB is extremely dirty stacks and ducts having dry particulate matter that can build up on the sensors. Applications include fossil-fueled power boilers, municipal waste incinerators, and combustion air flow situations with entrained fly ash.

The Model 454PFTB is designed to measure air flow only at ambient pressure. Canadian Registration (CRN) is not available for the Model 454PFTB.

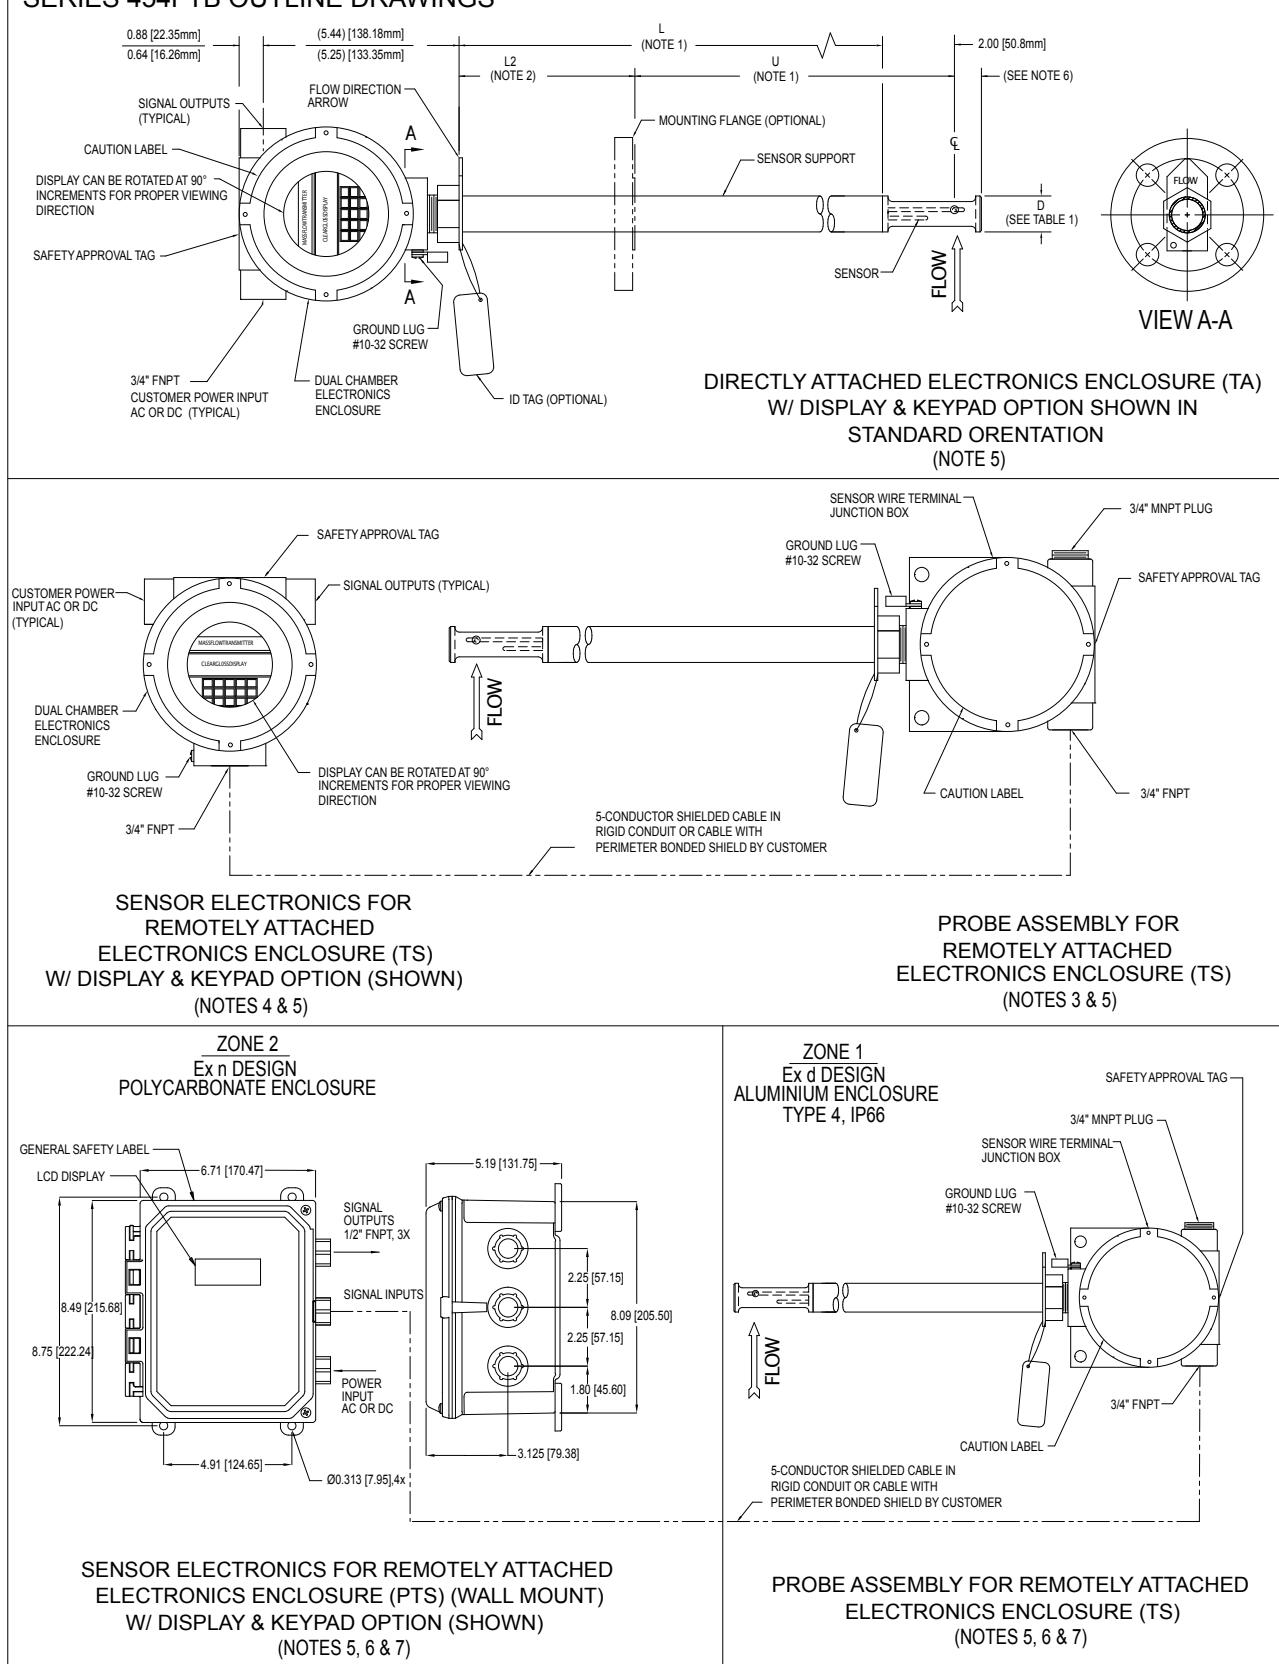

The Model 454PFTB has a special nozzle in the sensor window for use with the Model 146 Air Sensor Cleaning System. Sensor cleaning is accomplished by a short, high-pressureblast (sonic velocity) of air directed at the two sensors. The flow measurement value is held during the purge cycle.

The 454PFTB has a built-intimer and relay to initiate the purge cycle. Kurz provides solenoid valves and air blow-down tanks to allow periodic or on-demand cleaning. The air blow-down tank uses customer-supplied compressed air (instrument quality) at 60 to 125PSIG. The average cleaning air consumption is less than 0.125SCFM.
